

Instructions For Inserting The Grip Strip **THE MAVERICK® FINISHING PAN**

1. Peel off the paper backing.

2. While holding the grit strip at a 45-degree angle, insert the lower edge of the grit strip tightly into the bottom front of the pan.

3. Gently lay the remainder of the grit strip down assuring proper alignment with the sides before pressing all parts of the grit strip down firmly.

Note: Before using and inserting the grit strip, wash The Maverick with a strong grease cutting soap or detergent to take off the oily film from the manufacturing process. The manufacturing of plastic in molds creates an oily film on the pan, which opposes the retention of the desired materials.

It is not necessary to always use the grit strips. One uses the grit strips or not according to the size of gold they are panning. The Maverick has a "built-in" grit impression, which is very effective for panning very fine and micro type gold.

*See the "*Instructions for The Maverick*" for maximum efficiency and recovery.
